SUMMARY

- **AI & Full-Stack Engineer with 3+ years of experience** building production AI systems, multi-agent applications, analytics platforms, data pipelines, and cloud-native products across healthcare, analytics, talent technology, and startup environments.
- Specialized in **agentic AI architecture and production LLM systems**, including multi-agent orchestration, structured tool calling, RAG, prompt/context engineering, evaluation frameworks, observability, and human-in-the-loop workflows.
- Strong end-to-end engineering background spanning AI, backend, full-stack, data, and cloud systems, with measurable production impact including **90%+ faster AI evaluation cycles**, **60% lower agent-workflow latency**, and analytics pipeline runtime reduction from **~45 to ~10 minutes**.

SKILLS

AI Engineering: Agentic AI, Multi-Agent Systems, LLM Orchestration, RAG, Structured Tool Calling, Prompt & Context Engineering, LLM Evaluation, LLM-as-Judge, Human-in-the-Loop Evaluation, MCP, Vector Search & Embeddings, Langfuse, OpenTelemetry, Google ADK, Vercel AI SDK, OpenAI SDK

Languages & Full-Stack: Python, TypeScript, JavaScript, Go, SQL, React, Next.js, Node.js, Express.js, FastAPI, REST API Design

Data & Databases: PostgreSQL, BigQuery, Redis, Firestore, Neon, Supabase, pgvector, Data Modeling, SQL Optimization, CDC/Data Pipelines

Cloud & DevOps: GCP (Cloud Run, Vertex AI, Pub/Sub, BigQuery, Cloud Storage, Cloud SQL, Agent Engine), AWS (Lambda, S3, SQS, EC2, RDS), Cloudflare Workers/Pages/R2, Docker, GitHub Actions, CI/CD, Linux, Nginx

PROFESSIONAL EXPERIENCE

AI Engineer | DaVita, USA — Jan 2026 - Present

- Reduced AI evaluation feedback cycles by **90%+** by building a repeatable evaluation framework with a custom Streamlit dashboard, LLM-as-judge scoring, and human-in-the-loop validation.
- Reduced overall multi-agent workflow latency by **60%** by instrumenting agent-level latency, token usage, execution metrics, and bottleneck dashboards to identify performance issues.
- Enabled reliable support for **500+ concurrent users** by leading AI API load testing and resolving database contention, multi-worker write conflicts, and client SDK cold-start latency through process-safe database writes and lower-level SDK integrations that avoided unnecessary resource initialization.
- Designed the **core orchestrator** for a nephrologist-facing clinical multi-agent chatbot, routing queries to specialized domain agents based on intent, context, and downstream execution requirements.
- Improved reliability and safety through structured input/output schemas, controlled tool calling, prompt/context engineering, standardized error codes, and callback-driven fallback handling, reducing error-detection turnaround from **hours to minutes**.
- Implemented PostgreSQL-backed session persistence to retain historical chatbot sessions, supporting interaction continuity, auditability, and compliance requirements.
- Rapidly prototyped workflows using Google ADK and GCP Agent Engine while partnering with frontend, BFF, DevOps, and product teams to resolve IAM, deployment, and API-integration blockers for Alpha delivery.

Founding Engineer, Platform & AI | Trikona, India (Remote) — Jul 2025 - Present

- Cut full production restoration time by **~80%** by containerizing the WordPress multisite stack across PHP-FPM, Nginx, MariaDB, Redis, and WP-CLI; established bind-mounted local development for rapid iteration and GitHub Actions pipelines that build, version, and publish immutable production images to GHCR, improving environment consistency and recovery reliability.
- Built a VPS-hosted remote **AI development environment** using Dockerized application stacks and isolated Git worktrees, enabling coding agents to own **tasks end-to-end** - from implementation through testing and validation against a realistic development environment - while reducing repeated context/token overhead and enabling developers and product managers to supervise work from any device.
- Established **AI-assisted engineering review** and continuous-improvement workflows using automated daily code-change summaries, specialized performance/security reviewers, and continuously refined repository context and guardrails to surface recurring performance bottlenecks, WordPress multisite pitfalls, and implementation drift while feeding actionable feedback back to developers and coding agents.

- **Led technical direction for the development team** across application architecture, engineering standards, development environments, CI/CD, performance, code review, and AI-assisted SDLC; translated product priorities into executable engineering plans and codified reusable standards, validation practices, and lessons to improve delivery quality across both developers and autonomous coding agents.
- Built core professional identity, profile, resume, credential, and role-based onboarding systems for a construction talent ecosystem supporting professionals, students, corporates, colleges, SMEs, and administrators, with architecture designed for **5K+ users**.
- Designed read-optimized profile models and CDC-style synchronization workflows to separate high-frequency discovery/search workloads from transactional data, reducing expensive joins and improving scalability for filtering, recommendations, and directory use cases.
- Engineered bridge APIs and canonical-source-of-truth services to synchronize products, memberships, job permissions, learning access, and platform entitlements across interconnected platform modules.
- Developed role-aware authentication, access, jobs, learning, membership, event, and recruitment workflows, including LinkedIn-based onboarding and Digital Walk-In hiring flows spanning application, shortlisting, scheduling, and structured interview rounds.
- Spearheading the Placement Season product and developing a **multi-agent AI Career Advisor** that evaluates profiles, jobs, and courses against a unified skill-competency model to generate career guidance, job-fit insights, learning recommendations, and skill-gap analysis.

AI Engineer | 85SIXTY, USA **Jul 2025 - Jan 2026**

- Designed and implemented a **production AI agent platform** spanning analytics chat, automated reporting, prompt management, evaluation, observability, and user-feedback workflows.
- Built a full-stack AI analytics chatbot using Next.js, React, Vercel AI SDK, and BigQuery, supporting natural-language analytics queries, streaming responses, model selection, and secure tool-based data retrieval.
- Developed a **planner-analyzer-summarizer multi-agent architecture** to improve the structure, reasoning, and reliability of responses to complex analytics questions.
- Reduced data-pipeline runtime from **~45 to ~10 minutes** and memory requirements from **8 GB to 2 GB** by implementing CDC-style Cloud Run ingestion from Azure MSSQL to BigQuery.
- Architected a scalable Pub/Sub fanout reporting system with Cloud Run workers, Neon DB locking, acknowledgements, retries, exponential backoff, and dead-letter queues to prevent duplicate execution and improve resilience.
- Built Python reporting agents that generated analytics reports, stored results in Cloud Storage, delivered formatted output through Slack Block Kit, and captured structured user feedback for analysis and model improvement.
- Integrated Langfuse and OpenTelemetry for prompt versioning, tracing, evaluation, and observability, while building automated experiment workflows and multi-tenant infrastructure with isolated BigQuery datasets and Cloud Run pipelines per client.

Software Engineer Intern | FlairX, USA **Mar 2025 - May 2025**

- Scaled interview capacity from **8 to 40+ concurrent sessions** and reduced candidate wait times by **75%** by implementing multi-host scheduling workflows.
- Reduced interview no-shows and last-minute reschedules by **30%** by automating SMS and email reminders using Twilio and SendGrid.
- Built backend APIs for a benchmark analytics dashboard covering **100% of active job postings**, enabling recruiters to analyze interview and hiring performance.
- Reduced debugging time by **40%** through structured Winston logging and S3 log archival, while resolving a TypeORM migration defect that risked data loss across **10+ production tables**.

Software Engineer Intern | Truemates, USA **Jun 2024 - Mar 2025**

- Developed backend services for a production dating platform using Node.js, Express.js, Sequelize, PostgreSQL, Redis, Firebase, and Google Cloud Platform.
- Built Apple and Google subscription webhooks using official verification libraries, **eliminating third-party subscription-validation costs** while supporting secure auto-renewal workflows.
- Developed matchmaking, activity tracking, SalesOps, gifting, reviews, invitations, and related product capabilities across the platform backend.
- Established GitHub Actions CI/CD pipelines for GCP deployments and managed production data and media infrastructure using Cloud SQL, Firestore, Firebase Authentication, and Cloud Storage.

Data Science Intern | HERE Technologies, India **Jan 2023 - Jun 2023**

- Clustered **7K+ EV GPS traces** using DBSCAN and GeoPandas to identify high-traffic route hubs and surface **6+ candidate charging-station locations**.

- Improved dataset accuracy by **25%**, completeness by **14%**, and PostgreSQL query response time by **35%** through charging-data QA, synthetic data generation, and database performance optimization.

Interim Engineering Intern | Qualcomm, Hyderabad, India **May 2022 - Jul 2022**

- Reduced chipset-design validation time by **50%** by engineering an automated source-to-target path-tracing and validation system.
- Improved error-detection efficiency by **40%** and debugging speed by **35%** through pin-level traversal validation and a GUI for rapidly identifying design discrepancies.

PROJECTS

SREAI

- Built an AI-powered SRE platform using React, Cloudflare Workers/D1/KV, AWS Lambda, S3, SQS, and Amazon Bedrock, supporting GitHub repository onboarding, semantic code search, automated documentation, log analysis, and root-cause analysis.
- Developed repository indexing and Bedrock embedding pipelines that made medium-sized repositories searchable in **under 3 minutes**, with edge-backed repository lookups achieving **<20 ms P99 latency**.
- Automated log-to-RCA workflows using SQS, Lambda, vector search, retries, idempotency, and DLQs, delivering actionable root-cause reports in **under 60 seconds with zero silent drops**.
- Generated AI-powered repository documentation and architecture diagrams using Bedrock, Markdown, and Mermaid, reducing estimated new-developer onboarding time by **~40%**.

Fashion-Finder

- Built a computer-vision pipeline using YOLOv8, CLIP, FAISS, BART, PyTorch, and OpenCV to detect fashion items in video, match them against product catalogs, and classify overall style from user captions.
- Optimized video processing through frame skipping and batch inference while generating matched image crops and structured JSON debugging outputs for analysis and validation.

StockCentral

- Built and deployed a full-stack portfolio management application using React, Express.js, PostgreSQL, Docker, and AWS EC2, with automated CI/CD through GitHub Actions.
- Designed REST APIs and relational data models for portfolio uploads, stock/sector management, CSV processing, validation, search, filtering, and dynamic portfolio organization.
- Developed reusable React interfaces and modular backend services with robust error handling and input validation, supporting end-to-end portfolio management workflows.

EDUCATION

Master of Science in Computer Science | Arizona State University, Tempe, Arizona **Aug 2023 - May 2025**
GPA: 4.0/4.0

Bachelor of Engineering in Electronics and Instrumentation | Birla Institute of Science and Technology, Hyderabad, India **Aug 2019 - Jun 2023**
GPA: 8.35/10.0

CERTIFICATIONS

AWS Certified Cloud Practitioner | Scrimba: AI Engineer Learning Path | NVIDIA: Building RAG Agents with LLMs | Google Beginner: Introduction to Generative AI Learning Path | Google Advanced: Generative AI for Developers Learning Path
